Packaging	PTLROSYSTEM	PTLROSYSTEM-COMPLETE
	1 at 3kg	1 at 7kg

Features & Information

- The SPECTRUM Premier Twist Lock (PTL) Reverse Osmosis (RO) systems are the most effective way of producing pure water, free from 97% of most contaminants. The systems are configured with two high capacity carbon blocks and one high purity RO membrane - capable of producing up to 75 lpd of pure, healthy drinking water
- The small footprint of the SPECTRUM PTL system allows installation in the most confined spaces
- Available as a complete system, with 10 litre tank (tap, tubing, saddle valve and tap) providing a constant reserve of on demand pure water or a three stage stand-alone reverse osmosis (RO) solution
- No tools for filter change-outs makes the PTL one of the most practical and user friendly systems available
